Eagle Design -- Summary

- **Used by TRAC as a combat development analysis tool to study corps and division level force effectiveness issues. (Not a Training Simulation)**
- **Characteristics**
 - **Corps & below level simulation**
 - **Resolution to Battalion or Company (Entity level w/BDSD)**
 - **Deterministic (Stochastic w/BDSD)**
 - **Hybrid event Structure**
 - = **Attrition/Ground Movement/Detection/C2 are Time-stepped**
 - = **Air/ADA interactions are Event-driven**
 - **Integrates Artificial Intelligence methods and conventional combat modeling algorithms**
 - Object-Oriented**
 - Embedded AI Systems (expert systems)**
 - Symbolic decision making**
 - Lisp/KEE Programming environment**
 - **Command and Control modeled explicitly.**
 - Units execute orders and pass information based on a Battlefield Management language.**

- Summary

How does Eagle
use the HLA??

Eagle & the HLA

Summary of Effort - 3 Separate Federations

Eagle Early Analysis Experiment

Distributed Units -
Eagle Combat units interact
using the RTI.

Joint Training Federation (JTFp)

Distributed Functionality-
Army Combat units - Eagle
Navy Combat units - NSS
Air Force Combat units - NASM AP
Federation Controller

Eagle to MCSP/Beta - WarLab

Eagle Combat Hqs divest
Cognitive Processing to
Live Players using MCSP

Design facilitate running as standalone, individual or combined federations

Distributed Eagle Goal & Basic Design

- **GOAL:** Decrease computation load on single processor while minimizing interactions and maintaining the same temporal, tactical, organizational and spacial consistency that currently exists on a single processor.
 - = Maintain current validated models.
- **DESIGN:** Combat units are distributed among multiple Eagle simulations on the network.
 - = Each simulation maintains its own set of core services terrain, terrain evaluation, attrition, tactics DB ... etc
 - = Each simulation reflects all units not owned by the simulation.
 - = The distributed design maintains consistency between:
 - Services on simulations (Terrain conditions).
 - Combat units and their reflected representations.

Functionally Distributed Eagle Goal & Basic Design

- **GOAL:** Allow externally generated Objects (combat or environmental) to interact with Eagle generated combat units while maintaining the same or better temporal, tactical, organizational and spacial consistency that currently exists on a single processor.
- **DESIGN:**
 - Eagle provides all ground combat functionality for the federation. All ground combat units are reflected.
 - Functionality within Eagle is replaced by functionality provided by the confederation members.
 - = Eagle replaces normal fixed wing operations by
 - Subscribing to the federation air objects (classes)
 - Publishing & subscribing to interactions between the ground & air players (air to ground / ground to air)

Eagle to MCSP/Beta - Goal & Basic Design

- **GOAL:** Allow Live Players, using the MCSP/Beta, to replace the normal command and control activities of a simulated command post.
- **DESIGN:**
 - All physical activities of the command post are played in the simulation.
 - Cognitive activities of the command post are divested to the live players. Two way interactions are allowed
 - All information presented to the live players and their decisions are saved for analysis.
 - The simulated command post maintains a memory of its current state and decisions and can take over from the live players at any time.

{ Within Eagle
and
Between Eagle & the RTI

YES
A 10 year old
model written in an
archaic language
can play
in this game!!

Technical Approach within Eagle

- Example

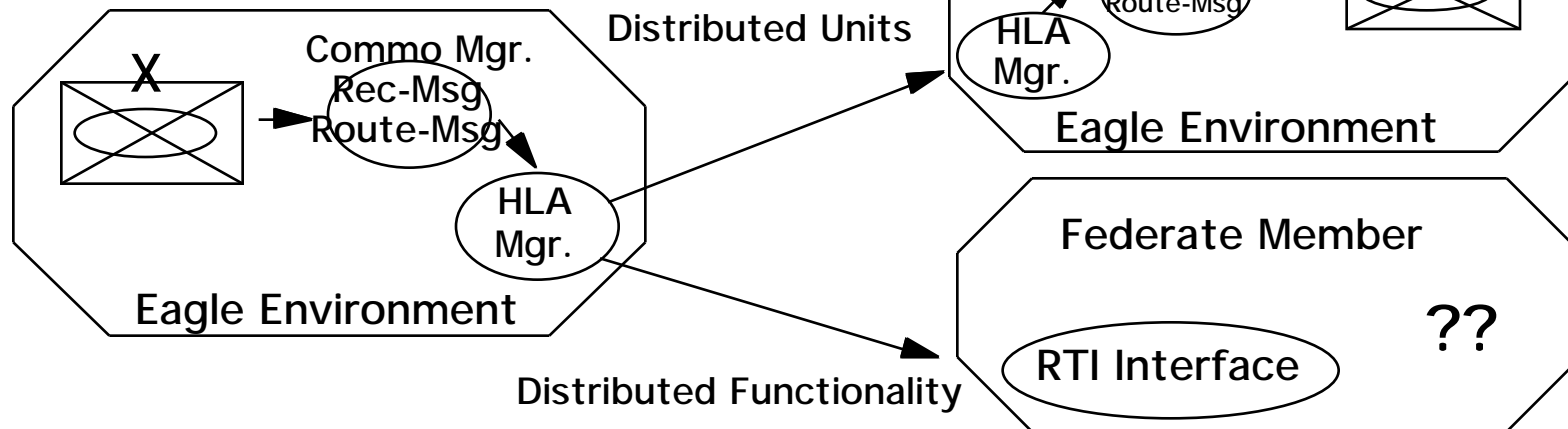

Communications between units.

Stand alone

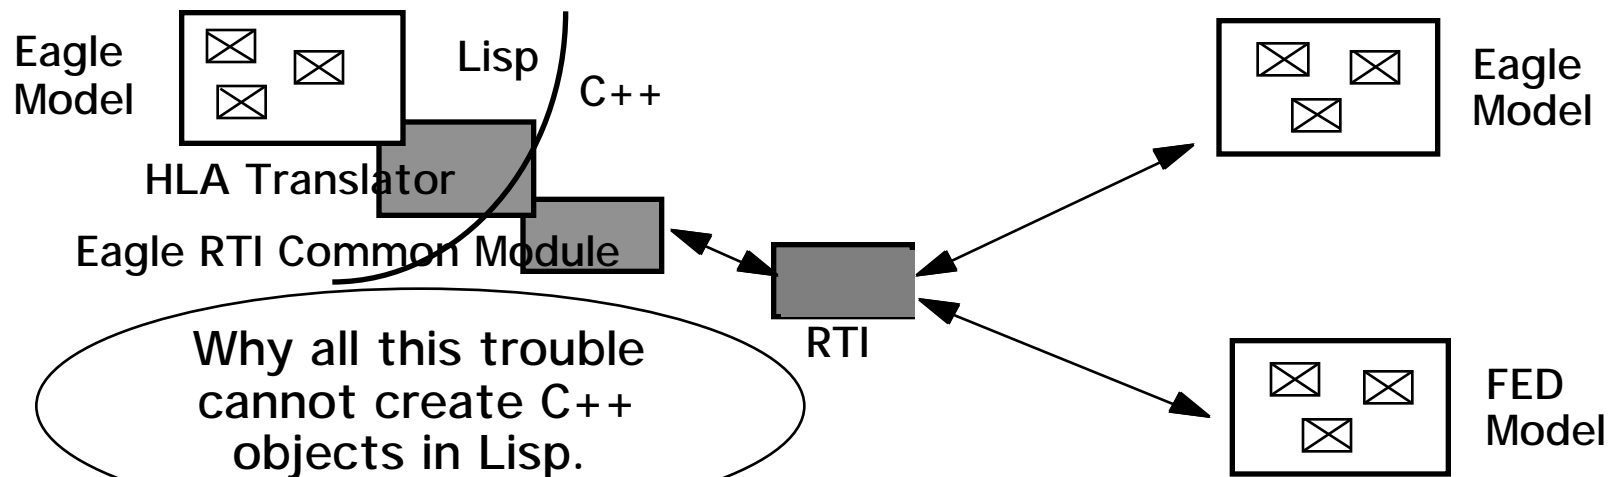

The Commo Mgr. delays msg
Jamming, Type equip, Combat state etc.

Distribute - where addressee is on different machine, else same as above.

Technical Approach between Eagle & the RTI

- A new Eagle Service (HLA Translator) is provided within the Eagle framework to provide the interface between Eagle objects & the RTI.
 - Very little was modified within the actual Eagle code. Most of the work was focused on the translator (11,000 lines of code).
- Each Eagle simulation HLA Translator Service (lisp) communicates with the RTI through an Eagle RTI Common module (C++). (app 4,000 lines of code)
- The Eagle RTI Common module provides the interface with the RTI -(RTI ambassador & Federate Ambassador).

- Eagle Design Summary
- Summary of Effort & Design
- Technical Approach
- Class Structures
- ④ Interactions
- Event Synchronization
- Summary

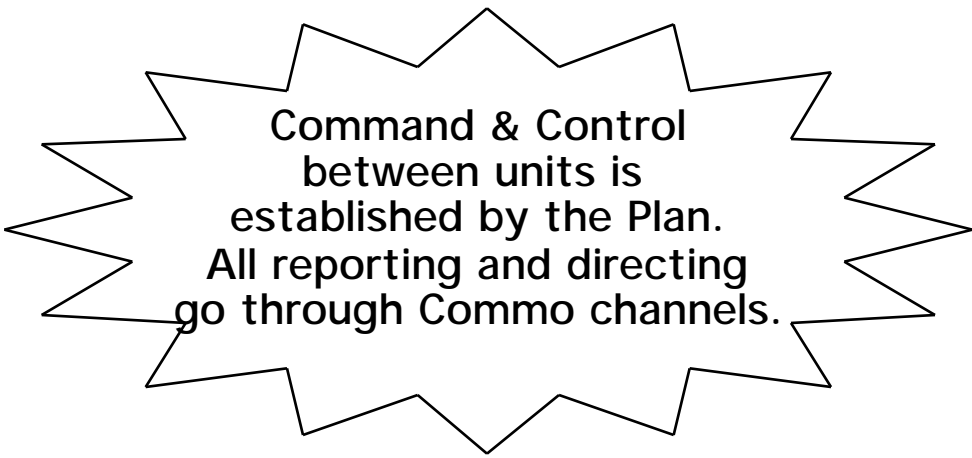

Distributed Eagle Interaction Structure

23 interaction types - total with subtypes: 65

○ Unit Interactions

- Detection (implicit)
- Direct Fire
- Indirect Fire
- Air to ground
- Ground to air
- Communications

Command & Control
between units is
established by the Plan.
All reporting and directing
go through Commo channels.

○ Service Interactions

- Event Queue
Management
 - Add/remove events
- Control Measures
Database consistency
 - Create CM
- Terrain Database
consistency
 - false targets
 - register engr work
- Attrition
 - Ammo use
 - Suppression

JTFp Interactions that involve Eagle

○ Unit Interactions

- **Detection (implicit)**
- **Indirect Fire**
- **Air to surface**
- **Surface to air**
- **Communications**

○ Federation Management Interactions

- **Initialization**

○ Environmental

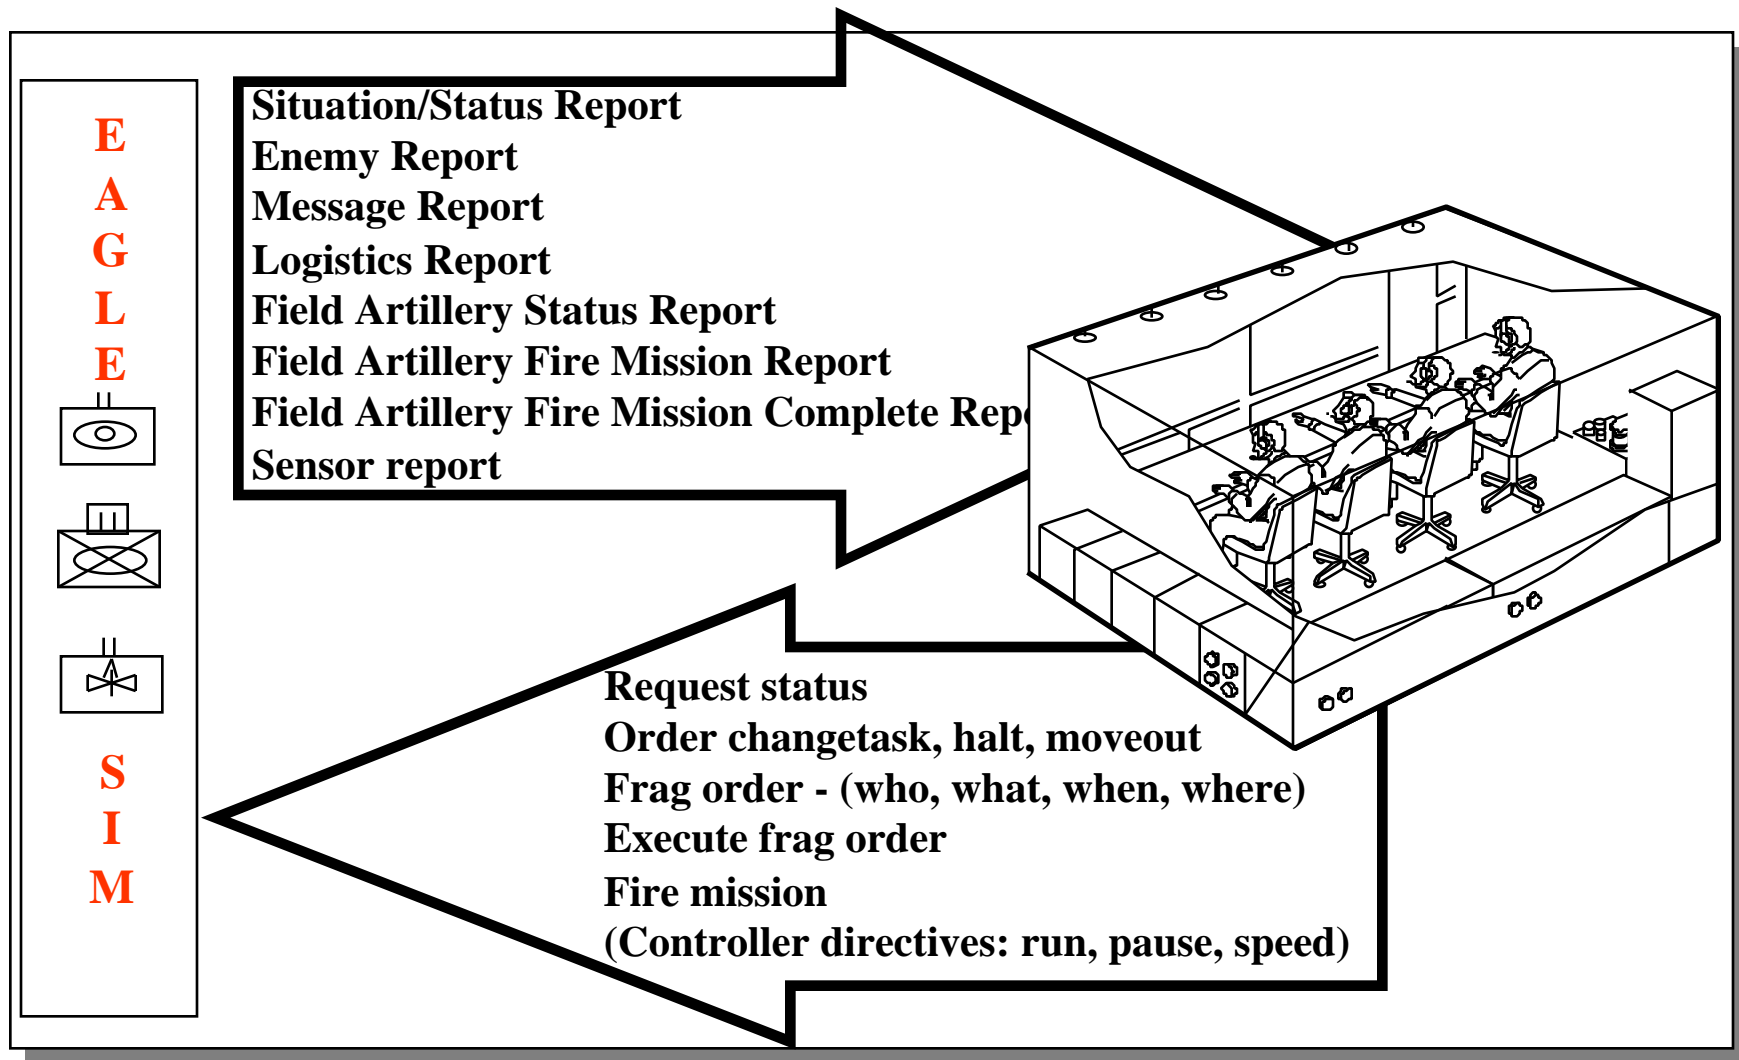

- **LOS**

Interaction	Initiating	Receiving
TBM Warming	Player	Eagle Commo Manager - Player
TBMLaunchAlert	Player	Eagle Commo Manager- Player
Situation Report	Player - Eagle Commo Manager	Player (JTF HQ)
RequestAirSupport	Player - Eagle Commo Manager	Player (JTF HQ)
AirToAggregate GroundEngage	Player	Eagle Attrition Manager
DiscreteGroundToAirEngage	Player	Eagle Attrition Manager
AggregateGround ToAirEngage	Eagle Attrition Manager	Player
Get & Return LOS	Eagle Terrain Manager	Surface Cover
Initialize Federation	Federation Status	Eagle Federation Status
Execute Federation	Federation Status	Eagle Federation Status

JTFp has defined 24 Interactions
Eagle subscribes/published to 10

EAGLE To MCSP Interactions

10 interactions defined (9 to MCSP, 1 to Eagle)

MITRE

Time Management
is your friend
not your enemy!

The Challenge

EAGLE TIME MANAGEMENT

Event Update Process -(Zero Lookahead Services)

MITRE

Event Queue Management

- **Subordinate Eagle's simulation event queue to that of the RTI**
 - **Approval to execute an Eagle event must come from the RTI.**
 - = **Request may be denied .**
- **Ability to respond to new external events from RTI.**
 - = **Eagle simulation event queue repair.**
 - = **Updating of aircraft situation within Eagle's timestep.**
 - = **Reallocation of ADA to respond to aircraft projected flight paths.**
- **Maintaining of Federate Time**
- **Causality & Consistency was maintained !!!!!**

**It Works
and it can be
done!**

Summary - Technical

Eagle & the High Level Architecture

○ Code Changes (< 3.0%)

- Basic model is app. 750,000 lines of code
- Added Translator Interface app. 16,000 lines of Lisp code
- Added 3,742 lines of C++ interface code.

○ Time

- Initial design & coding of Distributed Eagle using ALSP = 10 months
- SOM/FOM development = 1 months
- Modify the ALSP interface code = 3 months
- Creation of C++ interface code = 1 month
- Testing = 1 month

○ Eagle's Design (Architecture) & Object Oriented approach facilitated transition.

Summary - WHY????

Eagle & the High Level Architecture

- **Move to Distributed Simulation -**
 - **Increase speed & number of units able to play.**
- **Ability to share data with other simulations.**
 - **Able to use Military Service sponsored simulations that meet their standards of validation.**
 - = We get their validated and verified modeling algorithms and data for the representation of their systems.**
 - Better representation of Air - completely replaced**
 - Better physical models - flying of TBM's**
 - New Functionality - Ships**
- **Through Eagle/MCSP Interface able to improve (?) the simulation by allowing live players to replace the simulated command entities in Eagle.**
